ZINK-GRO® Powder

CAUTION:

This material contains zinc and should only be used as recommended. It may prove harmful when misused.

FOR USE AS A FERTILIZER INGREDIENT:

This product should be used on the basis of a soil and/or tissue analysis. For fertilizer application rates suitable for your geographical area or the maximum allowable application rate per hectare (per acre), consult a trained soils specialist or write to TETRA Micronutrients, The Woodlands, TX 77380. Scalped or severely eroded soils are more likely to be deficient in zinc than well-managed soils. Zinc deficiencies are more common on sands, sandy loams and organic soils because these soils originally contain low total zinc levels. Zinc availability decreases markedly as the soil pH increases. Zinc deficiencies are usually limited to soils with a pH above 6.5.

Information regarding the contents and levels of metals in this product is available on the internet at <http://www.wa.gov/agr/>
